ABOUT THE WORKSHOP

Digital methods and data are increasingly shaping research in the social sciences and the humanities. Research activity is evolving and increasingly incorporates digital tools and methods.

As a result, the demands on the management of the digital data material and software tools used and created in the research process are also increasing. Researchers have to meet requirements for long-term archiving, transparency, open access, and re-use of data as well as for the protection of the privacy of respondents, intellectual property of data creators, and copyright restrictions.

The major aim of the workshop is to facilitate an exchange about problems and solutions in research data management and regarding the application of digital methods in the humanities and social sciences with an emphasis on research about the post-Soviet region.
